

The Universe as a Non-Equilibrium Information Processing System: Cosmological Dynamics from Information Geometry

Mariano Panzano Caballé

January 15, 2026

7. Emergence of Structural Complexity and Self-Referential Systems

Within the present framework, the cosmological expansion driven by informational relaxation does not imply a monotonic drift toward featureless equilibrium. On the contrary, non-equilibrium statistical systems generically exhibit regimes in which localized structures emerge as efficient channels for entropy production... [Aquí va todo tu texto sobre las islas de coherencia y el ADN]...

8. Methodological Note on Computational Assistance

This work was developed with the assistance of computational language and symbolic analysis systems, used exclusively as tools for consistency checking, structural refinement, and linguistic optimization...
